

MCBH Adapter for Glass Spheres

MCBH-180

A single drilled hole with a ground flat in a glass sphere provides an end user the option of either a standard BH, MCBH, or LPBH connector with a 7/16-20 or 1/2-20 x 3/4" thread by using the **Global Ocean Design MCBH-180 Adapter**.

The **MCBH-180 Adapter** provides end users greater choice and faster delivery among readily available off-the-shelf connectors. It also provides end users with the flexibility to change connectors of different thread size in a simple and time efficient manner.

A clearance 9/16" Diameter drilled hole (37/64"/0.578"/15mm) and 1-1/8" Diameter (1.125"/29mm) ground flat is required in the sphere.

MCBH-180-221: The 7/16-20" bulkhead connector requires the MCBH-180-221 post and -221 adapter plate. Specify 485 Brass or 316SS to match the connector body at the time of order to eliminate galvanic corrosion.

MCBH-180-222: The 1/2-20" bulkhead connector requires the MCBH-180-222 post and -222 adapter plate. Specify 485 Brass or 316SS to match the connector body at the time of order to eliminate galvanic corrosion.

So unique it is patented.

Specifications

- MCBH-180 Adapter flange available in 485 Brass or 316SS.
- Available for threads 7/16-20 or 1/2-20 x 3/4" max thread length.
- Individually pressure tested to 10,000 psi. Testing to 18,000 psi available.
- Install Instructions and interior mounting hardware included.
